1907 For Better Gardens and Finer Flowers, 1948 Plant "JUNGS" Seeds, Plants and Shrubs

GREETINGS

In our "atomic" time changes are rapidly taking place, things which are standard today may be obsolete in a short time.

However, things that have not changed are that food must be grown from seeds and that without good seeds you cannot grow good crops.

Growing and selling seeds, plants, bulbs and shrubs has been our occupation for 41 years and during this time we have built up an enviable reputation for supplying products of the highest quality at reasonable prices.

Here in Wisconsin we own and operate over 800 acres of fertile soil devoted largely to growing Certified Seed Grain, Hybrid Corn, Garden and Flower Seeds, Bulbs and Shrubs, all of these crops receive expert attention from the time they are planted until they are sent to you.

These carefully grown products have pleased

thousands of farmers and gardeners in past years and you may rest assured that we use every effort to see that you receive "Quality" products from us on every order.

Northern Grown Seeds are unexcelled for earliness, hardiness and productiveness, you will find that Jung's Northern Grown Seeds cost very little more than ordinary strains, their cost is very small when compared to the superior crop which they will produce.

It will be greatly appreciated if you can send in your orders early, you will then be sure of having the seeds on hand when needed and will also get the kinds you want as every year we are sold out on many items before the season is over.

At this time we also extend our thanks for the many orders you sent us last year and at the same time assure you that we will send you Seeds, Plants and Shrubs of high quality this coming year.

J. W. JUNG SEED CO.

Dickinson's Humus Inoculation

**Will Increase Your Crops of
BEANS, PEAS and SWEET PEAS**

This is a compound which when applied to the seed before planting promotes stronger healthier growth, hastens maturity, increases the crop, improves the quality and also enriches the soil. It is for legume plants such as Beans, Garden Peas and Sweet Peas. In the case of Sweet Peas larger and finer flowers will be had and in Garden Peas and Beans your crop will be much heavier and of finer quality and you can pick more pods from each plant. It is easy to apply as it is put up in powder form and will stick to the seeds, no water is necessary and it can be used a little at a time. Garden size Pkt. (enough for 10 lbs. of seed) 15c; 2 for 25c. Bu. size for Beans or Peas 50c.

OPTOX PLANT SPRAY

On our Seed Farms and Nurseries we have tried out many different Plant Sprays but thus far have had the best results with Optox, especially for cucumber bugs.

This spray is deadly to insects but absolutely harmless to humans, birds and animals. Will not "burn" delicate leaves on tender flowers. While this spray has always been good it is even stronger now as new ingredients have been added, it contains no DDT. Optox costs a little more than some others but you will find it to be the cheapest when results are compared.

Easy to use as all that is necessary is to add water. Full instructions with every bottle or can.

BROCCOLI

CELERY CABBAGE

CELERY CABBAGE

Until recently this new vegetable was unknown but as its good quality became known it is rapidly gaining popular favor. Develops quickly and as the weather gets colder it heads up nicely producing crisp celery-like stalks beautifully blanched. It can be eaten raw, made into salads or cooked as cabbage or greens. Pkt. 8c; 1/2 oz. 12c; oz. 20c.

Having but few outside leaves it may be planted close together so that more heads can be grown to the acre than with other sorts. It is exceedingly tender, fine grained and as a cropper no early cabbage can approach it. Size is ideal for marketing. Pkt. 8c; 1/2 oz. 15c; oz. 25c.

Protect your Cabbage from worms, bugs and plant lice by using "Op-TOX." See page 1.

Chas. A. Nolting, Minn.—Am very much pleased with the crops grown from your seeds.

The ribs are perfectly solid, crisp, brittle and of a delicious flavor which is not surpassed by any other variety while it has the decided merit of being self-blanching to a remarkable degree. WHITE WONDER

LUSCIOUS TENDER SWEET CORN

Our stocks of Sweet Corn are mostly of our own growing and are of extra fancy quality and high germination. You will find that for earliness and sweetness our northern grown seed is way ahead of western grown seed. If you want to be the first on the market with Sweet Corn of quality, plant some of this seed.

Our Sweet Corn is grown on our seed farms where Stewart's Disease or wilt is unknown.

JUNG'S EXTRA EARLY FORTUNE—This variety originally came from Canada and at our Fairfield Farm trials it was the earliest of all. There is no product of the garden so eagerly waited for as the first sweet corn of the season. Early Fortune is the real tender, juicy sweet corn for use before the summer has really commenced. On account of its extreme earliness, Early Fortune is especially adapted for planting in northern latitudes and in high altitudes where other varieties fail entirely. The stalks do not grow very large but have two and often three unusually large ears. Ears are about 7 inches long and well filled with sweet and tender grains. Pkt. 7c; 1/2 pt. 22c; qt. 35c; qt. 65c.

EARLY WHITE DELICIOUS—Large Ears. Early Maturity. Superb Quality. One of the largest eared, sweetest flavored early varieties. Grows a strong, vigorous stalk, many producing two ears. Ears are 7 to 9 in. long and contain 12 to 14 rows of pearly white grains which are remarkably sweet and tender. Pkt. 7c; 1/2 pt. 22c; qt. 35c; qt. 65c.

GOLDEN OR BANTAM EVERGREEN—This variety of golden or yellow Sweet Corn combines the size of the Evergreen ear with the color and quality of the Golden Bantam. In crossing these two excellent varieties none of the good qualities have been lost, rather it surpasses them in sweetness and tenderness. The ears are 7 to 9 inches long, well filled with deep kernels of rich yellow corn. It comes just right in season to follow the first early sorts. The larger ear and prolonged season make it the favorite both in the home garden and for fancy market trade. All lovers of Sweet Corn must at least give Bantam Evergreen a trial. Pkt. 8c; 1/2 pt. 25c; qt. 40c; qt. 70c.

WHITE EVERGREEN—The Leading Late Variety of Sweet Corn. The most valuable Sweet Corn ever produced. White Evergreen is much superior to Stowell's. It retains all the most desirable features with the added merits of pure whiteness in color, a more tender grain and distinctly sweeter flavor. The ears average very large and are well filled to the tips with the long sweet grains of pure whiteness and most delicious flavor. The stalks are very strong growers from 6 to 7 feet high and sometimes bear three fine ears to a stalk. The ears contain 16 or more rows of deep grains which are protected by a thick heavy husk. Pkt. 7c; 1/2 pt. 20c; qt. 35c; qt. 60c.

EARS OF HYBRID ENSILAGE BLEND

Jung's Wisconsin Hybrid Ensilage Blend

**Will Fill Your Silo with Less Acres.
Giant Sized Ears. Tall Leafy Stalks.
Stands Up.**

This is a special blend of several Hybrids that mature over a period of 10 days so that even if weather during pollination is very hot you will have well filled ears and tall leafy stalks. Stalks will be 9 to 10 ft. high and each stalk will produce a large, well developed ear. The stalks and leaves remain green for a long time, thus making a fine quality of ensilage. Those who had lodged corn the past season will appreciate a corn that stands up under adverse conditions like this corn did. Ears are 8 to 10 in. long and a rich golden yellow color. Yields of 60 to 75 bu. per acre have been frequent. **Large Flat Kernels:** Bu. \$9.25; **Medium Flat Kernels:** Bu. \$9.15; **5 bu. \$45.00. Select Graded Medium Rounds:** Bu. \$7.25; **5 bu. \$35.00. Select Graded Large Rounds:** Bu. \$6.00; **5 bu. \$28.75. Small Flats:** Bu. (enough for 9 to 10 acres) \$8.00.

W-464—THE GOLDEN GLOW HYBRID

We Offer These Excellent Wisconsin Hybrids

W-355 90 Day This is probably one of the best and most widely grown Hybrids in the 90 day maturities. It is adapted to a wide range of soils and has shown up exceptionally well in test yields. Its medium tall stalks stand up unusually well, produce fine ears of medium length well filled with deep yellow kernels.

W-416 95 Day—Here is another unusually fine Wis. Hybrid suited for sections that must have an early maturing corn, or in many cases there are fields where for some reason planting is delayed until late in the season an early variety must be used. It is one of the best early maturing hybrids, ears are deep yellow, fine in appearance and remarkably large for so early a corn. Stalks grow 7 to 8 ft. tall, are very leafy and like all good hybrids stand up straight.

W-464—100 Day—This Hybrid is about the same maturity as early strains of Golden Glow and is especially suited for central Wis., Minn., and similar latitudes. If you wish to shred your corn you will find this variety will mature early and the stalks will cure out properly. Even though it ripens early it is a remarkably heavy yielder. Ears are 7½ to 8½ in. long, deep golden color and have 14 to 16 rows of deep kernels. It grows a strong vigorous stalk, 8 to 9 ft. tall, well supplied with foliage and has a

strong root system; it will stand up and produce a fine crop even in hot dry seasons.

W-525 105 Day—This is one of the most widely grown Hybrids in the medium maturities, famous for its high yields year after year. We sell more of this than any other variety. Stalks grow 8 to 9 feet tall, stand up straight and practically every stalk bears a large ear. Ears are large and showy. It has proved to be a dependable heavy yielder of high quality corn.

W-606—110 Day—A very good Hybrid suitable for Southern Wisconsin, Minnesota, Michigan, Northern Illinois, Iowa and similar latitudes. Vigorous tall stalks produce long ears well filled with deep yellow grains. The heavy yield of large handsome ears which this variety produces will delight every farmer who plants this corn.

W-641-A 115 Day—This is our largest and heaviest yielding Hybrid. It grows a strong tall stalk 8 to 10 feet tall, well supplied with heavy leaves. Each stalk will produce a very large handsome ear and it does not take many to fill a bushel basket. Shells out unusually heavy as it has such a small cob. Especially suited for Southern Wisconsin, Michigan, Minnesota and also for Illinois, Iowa, Indiana, Ohio and similar latitudes.

"LARGE ROUNDS"

We consider these to be one of the most desirable grades of Hybrid Seed Corn for the reason that the larger size of the kernel will come up stronger and endure more adverse weather and soil conditions than any other grade. All standard makes of corn planters can be supplied with plates that will drop "large rounds" just as accurate as any other size of kernel and the saving you make on a few bushels will more than pay for the cost of the plates. On our own farms we prefer these large kernels and always have splendid crops from them.

Extra Early Hybrid Corn - Wis. No. 335

Earlier Than Flint Corn. Heavier Yields.

We no longer offer Flint Corn as this Hybrid is even earlier, a far better yielder and is much easier to husk. Under normal conditions it will mature in 90 days and as it grows a tall stalk makes an excellent variety for areas where seasons are short. It is a reddish colored corn similar to the old "Smoky Dent" or Northwestern Dent. An excellent variety to plant for "hogging" down or for late planting, we are highly pleased with the yield of this corn as it is so much better than Flint. **Lb. 45c; 3 lbs. \$1.10, postpaid. Not prepaid: Large Flats, pk. \$2.95; bu. \$10.75; Med. Flats, bu. \$10.95; Med. Rounds, bu. \$8.00; Large Rounds, bu. \$7.25.**

VICLAND OATS

"VICLAND"

The Famous Rust-Proof Oats

America's Most Popular Oats.

Resistant to Rust and Smut. Stiff Straw. Immense Yielder.

Regardless of all the newer Oats that are being offered Vicland is still the most widely used variety. On our own farms we have now grown it for the past seven years and have had very high yields every year, frequently over 100 bu. per acre. It has a short stiff straw and is well suited for rich soils where other varieties lodge; it is resistant to both rust and smut. The kernels are medium in size, have a thin hull and usually weigh 36 to 39 lbs. per measured bushel. It will stand in damp or wet shocks for a long time without sprouting, a distinct advantage in wet seasons. Do not sow too thick, 2 bu. per acre is sufficient. **Certified Ceresan Treated Seed grown on our own farms: 3 bu. (1 bag) \$6.50; 5 bags or more \$6.40 per bag. Fancy State Tested Seed (grown from certified seed): Bag (2½ bu.) \$4.40; 5 bags or more at \$4.25 per bag. No charge for bags.**

MARION OATS

MARION OATS

Heavy Yielder. Resistant to Rust. Grows a Tall Straw.

Another fine rust-resistant Oat especially suited for light soils where Vicland might be too short. It was developed at the Iowa Agr. Station and has made wonderful yields where ordinary oats were failures. Kernels are white, slightly larger than Vicland and have a thin hull. **We have some nice clean seed grown on our own farms. Lb. 30c; 3 lbs. 70c, postpaid. Not prepaid: 2½ bu. (1 bag) \$4.50; 5 bags or more at \$4.25 per bag. Bags free.**

M. Muesgardes, Wis.—Your Hybrid Corn is the biggest and best in this neighborhood. Planted three different kinds but your seed is way ahead. The Wis. 38 Barley we had from you yielded 78½ bu. per acre.

Victor Lohaus, Wis.—Would like to compliment you on your seeds, have bought them for years and every seed seems to grow.

HENRY WHEAT

New Wisconsin Wheat "Henry"

Resistant to Rust and Smut. Heavy Yielder. Large Plump Kernels.

This remarkably fine new wheat developed at the Wis. Experiment Station will probably become as famous in wheat as "Vicland" is with oats. Its principal advantages are its resistance to smut and rust and its high yields, in tests covering several years it has greatly outyielded the older varieties and it will probably be one of the most widely sown spring wheats here in the north central states.

It grows a strong stiff straw, stands up well and matures about 5 to 7 days after Vicland Oats. The kernels are much larger than most spring wheats and have good milling and baking qualities.

The certified seed we offer made the remarkable yield of 56 bu. per acre this past year, we have but a limited quantity of this wheat to offer. **Certified Seed: Bu. \$4.75; bag (2½ bu.) \$10.75.**

JUNG'S NEW IMPROVED PROSO

The Great Emergency Grain Crop. Matures in 60 to 70 Days. Excellent Poultry and Hog Feed. Taller Straw. Large Heads. Bigger Yields.

This is a great improvement over the common hog millets as it is a special selection made at our seed farms for taller straw and larger heads and also heavier yields. It makes an unusually good poultry feed and is equal to grain for live stock. Well suited for dry areas where barley and oats will not succeed; here in the middle west it can be sown as late as July 10th and still make a crop. We have had yields of 42 bu. per acre on our farms. Sow broadcast 30 to 35 lbs. per acre. **Lb. 35c; 3 lbs. 95c postpaid. Not prepaid: 25 lbs. \$1.95; 50 lbs. \$3.75; 100 lbs. \$7.50. Bags free.**

JUNG'S NORTHERN GROWN FARM SEEDS

No other article will bring a farmer greater returns on his investment than planting the best seeds it is possible to purchase. It costs just as much to raise a poor crop as a good one and without good seeds the best land and cultivation cannot produce a good crop. The Farm Seeds we offer are uniformly of the VERY BEST GRADE, free from foul weeds and of high germination. The Earliness and Tremendous Productiveness of Northern Grown Seeds need no comment, they stand at the head of the list. No charge for bags, remember this when comparing prices. All prices subject to change.

WIS. No. 38 SMOOTH BEARDED BARLEY

The Coming Barley. Smooth Beards. Easy to Handle as Oats. Large Plump Kernels. Heavy Yielder. Why Grow the Old Bearded Variety Any Longer? This New Barley is Pleasant to Handle and Yields More. The beards are smooth and will not cling like the ordinary barley and for this reason will soon displace the rough bearded varieties. However, the smooth beards are not its only good characteristic; in a test conducted at the Wisconsin Experiment Station over a period of 4 years the Wis. 38 average yield was 54.6 bushels per acre. **We have seed to offer this year that was grown on our own farms, is high in germination and free from foul weeds. Blue Tag Certified Seed: Lb. 35c; 3 lbs. 90c, postpaid. Not prepaid: Bu. \$4.25; 2½ bu. \$10.25. State Tested Seed: Bu. \$3.35; 10 bu. \$32.00. Bags free.**

FORVIC OATS

New "FORVIC" OATS

This is another of the new Oats that was developed at the Wis. Experiment Station. It has now been planted quite extensively for two years and has made some remarkable yields. On our own seed farms the past season it out-yielded both Clinton and Vicland. It is both rust and smut resistant, grows a taller straw than Vicland and ripens 3 to 4 days later, a very desirable variety for light soils where many other varieties are too short. Produces a large white kernel with a thin hull and as a rule white oats command the best prices. **Certified Ceresan Treated Seed grown on our own farms: 3 bu. (1 bag) \$6.65; 5 bags or more \$6.50 per bag. Fancy State Tested Seed (grown from certified seed): Bag (2½ bu.) \$4.40; 5 bags or more at \$4.25 per bag. No charge for bags.**

WIS. ROX ORANGE SORGHUM OR SUGAR CANE

Probably the best sorghum or sugar cane of them all. Developed at the Wisconsin Experiment Station and bred for high sugar content. It grows a thick sturdy cane, produces a high quality syrup and more of it than any other variety. Owing to its unusual sweetness it is unexcelled for silage as it grows 8 to 10 feet tall. **Select seed of our own growing: Lb. 40c; 3 lbs. \$1.10, postpaid. Not prepaid: 25 lbs. \$5.00; 100 lbs. \$18.50.**

ALFALFA THE GREAT HAY CROP FOR AMERICA

A clover-like leguminous plant of great importance as a hay crop; nutritious and rich in protein elements. It grows from 2 to 5 feet high and roots 8 to 12 ft. deep. It needs one season to become established; after that it yields enormous crops annually for years. Two to six cuttings per season, aggregating three to eight tons of cured hay are harvested, according to conditions and locality. It should be grown by every farmer and dairyman.

NOTE All of the Alfalfa seed we offer is strictly select quality seed of the highest grade. It is plump, of high germination and free from fowl weeds. Do not confuse this seed with second or screening grade often offered at "bargain prices."

HARDY WISCONSIN—This seed is no doubt mostly all grown from Grimm seed but as the state of Wis. has no provision for certifying this seed it cannot be sold as such, however, the fact that it has withstood the hard winters long enough to produce a crop of seed is evidence that it is very hardy. The seed we are offering is very bright and plump and free from fowl weeds.

HARDY CANADIAN—This is probably one of the most hardy strains of Alfalfa, the seed we offer was grown in Ontario, Canada, and should, therefore, survive any Wisconsin winters. You will find this strain to compare very favorable with the regular Grimm and it does not cost as much.

Why You Should Grow ALFALFA

It is always advisable to inoculate Alfalfa.

It contains as much protein as wheat bran.

It does not exhaust but enriches the soil.

It produces from three to eight tons of hay to the acre.

One acre will pasture 20 hogs for 6 months.

Thirty-five pounds makes a full feed for fattening steers.

A lamb will winter and thrive on three pounds a day.

There is no state in the Union where Alfalfa cannot be successfully grown.

DRY LAND DAKOTA—This strain is practically as hardy as Grimm and is very popular here in the north where winters are severe. The seed we offer is of very high quality and was grown on dry land in the "Blackhills" region where winters are even more severe than in Wisconsin.

FANCY KANSAS—Although lower in price it has proved very desirable for hardiness. At the Wis. Exp. Station they rank it next to Mont. and S. Dak. for hardiness.

FANCY NEBRASKA—This seed has been used in Wis. for many years with gratifying results and many farmers sow nothing else for their alfalfa crop. We have nice seed to offer this year.

A SECOND CUTTING OF ALFALFA

Jung's Fancy Recleaned Clover Seed

Clover is without any question the most popular and widely grown crop for hay, pasture and also for building up or enriching the soil. This season the price of the seed is very high but every farmer should sow clover liberally. In sowing clover nothing is more important than that the seed be pure and free from fowl weeds.

FANCY MEDIUM OR RED CLOVER

This is the most popular and widely grown clover as it usually makes two crops a year. The first is usually cut when in bloom for hay; the second crop may be cut for hay, harvested for seed or pastured. This seed is very scarce this year, we have only a very limited stock to offer. **Select fancy seed:** Lb. \$1.10; 3 lbs. \$3.00, postpaid. Not prepaid: Pk. \$10.95; bu. \$41.00.

ALSIKE CLOVER

The advantage of Alsike over Red Clover is its true perennial character and great hardiness. It will adapt itself to extremes of either wet or drought and will flourish on soils where red clover would not grow. It is also more leafy and does not have heavy stalks and for this reason makes a finer hay especially when sown with Timothy. Also excellent for pasture as it is very hardy and seldom winter-kills. Alsike is the only clover that will thrive and not kill out on low places. **Fancy Seed:** Lb. 80c; 3 lbs. \$2.10, postpaid. Not prepaid: Pk. \$8.70; bu. \$33.25.

FANCY RECLAIMED TIMOTHY

As a crop for hay TIMOTHY is probably unsurpassed by any other grass. It is highly relished by all kinds of stock, especially horses. It yields more nutritive matter than any other grass or forage plant. It is not suited for a permanent pasture as it will run out in the course of a few years. The largest crops of hay are raised on rich land. It is not suited for light, sandy soil so well as some other grasses. The most important point in the growing of TIMOTHY is the selection of **GOOD SEED. Dickinson's Humus Inoculation

Now you inoculate your alfalfa, clover, soybean or other legume seed without the use of water and still be sure of a growth of soil-improving root nodules as full and vigorous as was formerly possible to obtain only by the use of bottle or "jelly" type cultures.

Dickinson's New Humus Inoculation has been perfected after careful study and experiment in the country's largest commercial soil bacteriological laboratory. Each culture contains millions of vigorous root nodule bacteria living in a specially blended humus substance which can be mixed with the seed dry, just as it comes from the can. Every can contains plenty of culture material to fully inoculate the quantity of seed for which it is intended.

Full directions are printed on the label. No skill or experience is required to get good results with Dickinson's Humus Inoculation. It is safe and easy to use and produces sure results at a cost of only a few cents per acre. Only a few minutes are required to inoculate the seed which can then be sown immediately. Many growers now prefer Dickinson's Humus Inoculation because of the handy form and the ease with which it is used.

New Improved Semesan Jr. increased the yield on the average 3.55 bushels per acre. Only 4 ears, or 3½ pounds of corn required to pay for this increase in yield.

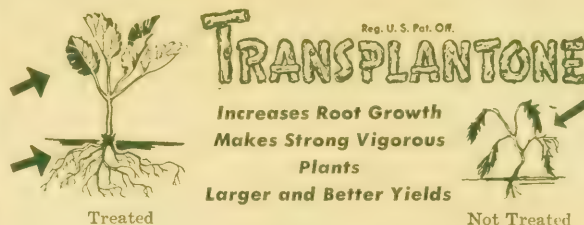

Treat Your Seed Corn With NEW IMPROVED SEMESAN JR.

Diseases of corn, such as Ear, Root and Stalk Rots, that attack corn cause millions of dollars loss every year to the American farmer. Semesan Jr., not only holds these diseases in control but it also increases the yields from 5 to 10 per cent. We have found it extremely valuable for treating all of the corn we plant, especially when the soil is wet and cold, as it will prevent rotting of the seed. It is easy to apply to the seed by dusting 1½ oz. to a bushel of seed. It only costs 3 to 5 cents per acre to treat your seed corn and we believe is one of the best paying investments any farmer can make. Ask for booklet on Treating Corn with Semesan Jr. 1½ oz. pkt. 15c, 2 for 25c; 12 oz. can 65c; 6¼ lb. can \$3.75.
